PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 18; Page 140-142; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence is that of proHCPB with a PelB leader
CC   sequence encoded by pICI1738.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT Please visit our web site (http://genome.gsc.riken.go.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAGCGGCCGCAACTCGAGTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence[5' GAGAGAGAGAAGGATCCAAGAGCTCAATTAATTTAATTAAACCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: SstI; 3' end: XhoI. Host: SOLR.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Claim 2b; Page 64-68; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 4; Fig 1; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   cDNA, the gene for which is located on chromosome 13.

PT   Detecting new polymorphism of human plasma carboxypeptidase B -
PT   comprises Alanine or Threonine at position 147 of protein by DNA or
PT   protein analysis, useful to detect risk of thrombotic disease in
PT   humans
XX
PS   Example 1; Page 24; 35pp; English.
XX
CC   This sequence encodes the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT   Diagnosing and detecting the progression of liver cancer,
PT   hepatocellular carcinoma or metastatic liver tumor in a patient,
PT   involves detecting the level of expression of two or more genes in a
PT   liver tissue sample  -
XX
PS   Claim 1; SEQ ID NO 2397; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT   Using human plasma carboxy:peptidase B in blood coagulation - is
PT   functionally related to carboxy:peptidase A and pancreas
PT   carboxy:peptidase B
XX
PS   Example 2; Column 37-42; 39pp; English.
XX
CC   This sequence encodes human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.
CC   (Updated on 25-MAR-2003 to correct PF field.)

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Disclosure; Fig 4; 40pp; English.
XX
CC   Human plasma carboxypeptidase B was isolated from human plasma and
CC   partially sequenced. Oligonucleotide primers were designed based on
CC   the partial amino acid sequences. The primers were used in a PCR
CC   amplification to identify cDNA encoding PCPB from a human liver cDNA
CC   library. The PCR product was capable of encoding the first 37 amino
CC   acids of PCPB; a 46mer probe was used to obtain the full-length
CC   sequence which, although disclosed in the specification, is not
CC   claimed. PCPB inhibits the enzymatic conversion by tPA of
CC   plasminogen to plasmin in the presence of fibrinogen.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 1; Page 507; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   DNA encoding porcine carboxy:peptidase B - used for transforming
PT   host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS   Claim 2; Page 20-21; 34pp; English.
XX
CC   The porcine carboxypeptidase B coding sequence can be place in a
CC   bacterial or pref. Pichia yeast expression vector. The expression
CC   vector further comprises the signal peptide of either human serum
CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

XX
PS   Reference Example 14; Page 131; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence encodes the native prepro-HCPB (see
CC   AAW06172) contained in vector pICI1698.

PT   New modified pro-domain of carboxy-peptidase B - enhances expression
PT   of co-expressed proteins for production of recombinant
PT   carboxy-peptidase or its fusions with antibodies, used, e.g. in
PT   enzyme prodrug therapy
XX
PS   Example 1; Page 52-53; 83pp; English.
XX
CC   The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC   modified pro-domain of CPB on a separate gene to enhance recombinant
CC   expression.  This process can be used to produce recombinant CPB in
CC   eukaryotic cells, or fusions of CPB with antibody chains.  CPB is used in
CC   insulin production and protein sequencing, while its fusions with
CC   antibodies are useful in antibody-directed enzyme prodrug therapy.  The
CC   modified pro-domain provide increased yields of recombinant CPB, possibly
CC   by protecting the C-terminus against enzymatic degradation or by
CC   increasing intracellular trafficking.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 18; Page 140-142; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence is a cloned pro-HCPB gene contained in
CC   plasmid pICI1738 and which can be expressed in E. coli.

PT   Anti-carcinoembryonic antigen antibody 806.077 Ab - used for
PT   diagnosis and therapy of cancer
XX
PS   Example 75; Page 181-183; 208pp; English.
XX
CC   This sequence encodes preproHCPB-linker-humanised 807.077 VH, which is
CC   an example of the antibody of the invention. The antibody is an anti-CEA
CC   (carcinoembryonic antigen) antibody (preferably 806.077 Ab). Host cells
CC   or transgenic organisms transformed with DNA encoding the antibody, are
CC   used to make the antibody or conjugate. The conjugate is used in a
CC   medicament suitable for intravenous administration. The conjugate can be
CC   used for cancer therapy, selectively killing tumour cells. The antibody
CC   can be used for in vivo or in vitro diagnosis of cancer.

PT   Screening for anti-neoplastic agent involves exposing cells to a
PT   chemical agent to be tested for anti-neoplastic activity, and
PT   determining a change in expression of a gene of a signature gene set  -
XX
PS   Claim 1; SEQ ID 4168; 44pp; English.
XX
CC   The present invention describes a method (M1) for screening for an
CC   anti-neoplastic agent. The method involves exposing cells to a chemical
CC   agent to be tested for anti-neoplastic activity, determining a change in
CC   expression of at least one gene (I) of a signature gene set, where (I)
CC   comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC   to ABL70110), or is at least 95% identical to (S), where a change in
CC   expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC   activity and can be used in gene therapy. M1 can be used for screening
CC   an anti-neoplastic agent, and can be used for producing a product which
CC   is the data collected with respect to the anti-neoplastic agent as a
CC   result of M1, and the data is sufficient to convey the chemical
CC   structure and/or properties of the agent. M1 can be used in the
CC   treatment of cancer such as colon, breast, stomach, lung, thyroid,
CC   oesophageal, ovarian, kidney, prostate or pancreatic cancer,
CC   adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer,
CC   infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine
CC   carcinoma, papillary carcinoma and Wilm's tumour.

PT Pharmaceutical kits for use in the treatment of prostate cancer,
PT comprise anti-human seminal plasma protein single-chain antibody/human
PT carboxypeptidase fusion protein and a prodrug of
PT methotrexate-alpha-peptides -
XX
PS Claim 4; Fig 3; 29pp; Chinese.
XX
CC The invention relates to a pharmaceutical kit for antibody-directed
CC enzyme prodrug therapy (ADEPT) to treat prostate cancer. The kit
CC comprises several respective containers for holding anti-human seminal
CC plasma protein single-chain antibody (ScFv)/human carboxypeptidase A
CC (hCPA) fusion protein (ABP97414), a prodrug of methotrexate-alpha-peptide
CC and a pharmaceutically-acceptable auxiliary for medication. The invention
CC also encompasses the anti-human seminal plasma protein ScFv/hCPA fusion
CC protein, and the nucleic acid encoding it (ABZ75116). This was
CC constructed by linking DNA encoding the ScFv (itself generated by linking
CC DNAs encoding the heavy and light chain variable regions (VH and VL) of
CC the murine anti-human seminal plasma protein monoclonal antibody E4B7)
CC to DNA encoding human carboxypeptidase A via a linker. The ScFv portion
CC of the fusion protein enables it to be specifically targeted to prostate
CC cancer cells, where the hCPA portion can then activate the prodrug which
CC in turn has cytostatic activity towards the cancer cells. The invention
CC permits the fusion protein to be easily produced in large quantities for
CC use in ADEPT for prostate cancer treatment. The present sequence
CC represents DNA encoding the ScFv/hCPA fusion protein of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission
JOURNAL Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp, URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)
COMMENT Please visit our web site (http://genome.gsc.riken.go.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAGCGGCCGCAACTCGAGTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence[5' GAGAGAGAGAAGGATCCAAGAGCTCAATTAATTTAATTAAACCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: SstI; 3' end: XhoI. Host: SOLR.

             Computer-based methods for the mouse full-length cDNA
            encyclopedia: real-time sequence clustering for construction of a
            nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
             cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues.
             Please visit our web site (http://genome.gsc.riken.go.jp) for
            further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Human brain carboxypeptidase B isolated from the hippocampus useful for
PT screening agents for the treatment of Alzheimer's and other brain
PT disorders -
XX
PS Disclosure; Page 71-73; 84pp; Japanese.
XX
CC This invention describes a novel protein with peptidase activity
CC against brain beta-amyloid precursor protein which has been isolated from
CC human hippocampus and which has cerebroprotective, antialzheimers,
CC nootropic, neuroprotective and hemostatic activity and which can be used
CC as a vaccine or for gene therapy. The protein, and compounds identified
CC by screening as promoters or inhibitors of its activity, are used to
CC regulate beta-amyloid accumulation in the brain and treat or prevent
CC diseases in which this occurs, such as Alzheimer's, senile dementia,
CC inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 1; Page -; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   protein, variant #2, the gene for which is located on chromosome 13.
CC   Note: This sequence is not shown in the specification but has been
CC   created by the indexer from information given in figure 3.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

CC   This sequence represents human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.

PT   Detecting new polymorphism of human plasma carboxypeptidase B -
PT   comprises Alanine or Threonine at position 147 of protein by DNA or
PT   protein analysis, useful to detect risk of thrombotic disease in
PT   humans
XX
PS   Disclosure; Page 25-26; 35pp; English.
XX
CC   This sequence is the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Claim 2; Fig 4; 40pp; English.
XX
CC   This amino acid sequence was deduced from a clone isolated from a
```

```
CC   human liver cDNA library. There is about 40% sequence identity
CC   between the deduced preproPCPB amino acid sequence and pro-human
CC   mast cell carboxypeptidase A and between preproPCPB and prepro-rat
CC   carboxypeptidase B. Human PCPB has the same substrate binding sites
CC   as, and shares 6 cysteine residues which form 3 intramolecular
CC   disulphide bonds with, bovine and rat carboxypeptidase B. The
CC   presence of the same amino acid (Asp at position 348 of the mature
CC   protein) at the region in carboxypeptidases that determines
CC   substrate specificity, suggests that PCPB represents a plasma-
CC   derived carboxypeptidase. PCPB inhibits the enzymatic conversion by
CC   tPA of plasminogen to plasmin in the presence of fibrinogen.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Disclosure; Page 74-75; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 11; Page 944-945; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   DNA encoding porcine carboxy:peptidase B - used for transforming
PT   host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS   Example 1; Page 16-17; 34pp; English.
XX
CC   The porcine carboxypeptidase B coding sequence can be place in a
CC   bacterial or pref. Pichia yeast expression vector. The expression
CC   vector further comprises the signal peptide of either human serum
CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 14; Page 131-132; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence is that of the native prepro-HCPB.

XX
CC   The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC   modified pro-domain of CPB on a separate gene to enhance recombinant
CC   expression.  This process can be used to produce recombinant CPB in
CC   eukaryotic cells, or fusions of CPB with antibody chains.  CPB is used in
CC   insulin production and protein sequencing, while its fusions with
CC   antibodies are useful in antibody-directed enzyme prodrug therapy.  The
CC   modified pro-domain provide increased yields of recombinant CPB, possibly
CC   by protecting the C-terminus against enzymatic degradation or by
CC   increasing intracellular trafficking.

XX
CC The present sequence represents a zinc carboxypeptidase B precursor.
CC The specification describes a human zinc carboxypeptidase B-like
CC protein. The zinc carboxypeptidase B-like protein is used for treating
CC diseases, such as cancer, a CNS disorder, chronic obstructive pulmonary
CC disease (COPD) or haematological disorders. The zinc carboxypeptidase
CC B-like protein may also be used to identify compounds which may act
CC as activators or inhibitors at the enzyme's active site, to raise
CC specific antibodies which can block the enzyme and effectively reduce
CC its activity, as a bait protein in a two-hybrid or three-hybrid assay
CC to identify other proteins which bind to or interact with the human
CC zinc carboxypeptidase-like protein polypeptide and modulate its
CC activity, and for immunization of mammals.

PT Two component system for anti-tumour therapy - comprising targeting
PT moiety linked to mutated enzyme which can transform an
PT anti:neoplastic prodrug
XX
PS Reference Example 18; Page 140-142; 182pp; English.
XX
CC A two-component system for anti-tumour therapy comprises a targeting
CC moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC prodrug. The system is based on antibody directed enzyme prodrug therapy
CC (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC be used. The present sequence is that of proHCPB with a PelB leader
CC sequence encoded by pICI1738.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T33526
hypothetical protein T06A4.3 - Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Date: 29-Oct-1999 #sequence_revision 29-Oct-1999 #text_change 29-Oct-1999
C;Accession: T33526
R;Wu, X.; Tin-Wollam, A.; Ozersky, P.; Wilson, R.
submitted to the EMBL Data Library, October 1998
A;Description: The sequence of C. elegans cosmid T06A4.
A;Reference number: Z21364
A;Accession: T33526
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-667 <WUX>
A;Cross-references: EMBL:AF098994; PIDN:AAC67474.1; GSPDB:GN00019; CESP:T06A4.3
A;Experimental source: strain Bristol N2; clone T06A4
C;Genetics:
A;Gene: CESP:T06A4.3

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone: 'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone: 'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Claim 2b; Page 64-68; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT New isolated human protease proteins, useful for developing therapeutic
PT or diagnostic compositions, particularly for developing human
PT therapeutic agents that modulate protease activity in cells or tissues
PT -
XX
PS Claim 4; Fig 1; 80pp; English.
XX
CC The invention discloses an isolated human protease peptide, its allelic
CC variant or orthologue. The proper functioning of the cell requires
CC careful control of the levels of important structural proteins, enzymes
CC and regulatory proteins. One of the ways the cell reduces the steady
CC state level of a particular protein is by proteolytic degradation.
CC Proteolysis can also be used to convert a pre or pro-protein in to an
CC active form. Proteases also regulate many different cell proliferation,
CC differentiation and signalling processes. The peptides and nucleic acid
CC molecules are useful in the development of human therapeutics (gene and
CC protein therapy) and diagnostic compositions. The peptides are also
CC useful for raising antibodies or eliciting an immune response (vaccine),
CC as a reagent (including the labeled reagent) in assays designed to
CC quantitatively determine levels of the protein (or its binding partner or
CC ligand) in biological fluids, or as markers for tissues in which the
CC corresponding protein is preferentially expressed and in methods for
CC identifying a modulator of the peptide or an agent that binds to the
CC peptide. The agents identified are useful for treating protease-related
CC conditions that are specific for the subfamily of proteases that the
CC peptide belongs to, particularly in cells and tissues that express the
CC protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC disorders. The modulator of the peptide is also useful for treating a
CC disorder characterised by an absence of, inappropriate or unwanted
CC expression of the protein. The sequence presented is the human protease
CC cDNA, the gene for which is located on chromosome 13.

PT   Detecting new polymorphism of human plasma carboxypeptidase B -
PT   comprises Alanine or Threonine at position 147 of protein by DNA or
PT   protein analysis, useful to detect risk of thrombotic disease in
PT   humans
XX
PS   Example 1; Page 24; 35pp; English.
XX
CC   This sequence encodes the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT Diagnosing and detecting the progression of liver cancer,
PT hepatocellular carcinoma or metastatic liver tumor in a patient,
PT involves detecting the level of expression of two or more genes in a
PT liver tissue sample -
XX
PS Claim 1; SEQ ID NO 2397; 298pp; English.
XX
CC The invention relates to a novel method for diagnosing and detecting the
CC progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC tumour in a patient, and differentiating metastatic liver cancer from
CC hepatocellular carcinoma in a patient, involving detecting the level of
CC expression of two or more genes represented in ABN93503-ABN97455 in a
CC tissue sample. The method of the invention has hepatotropic, and
CC cytostatic activity. The method is useful for diagnosing and detecting
CC the progression of liver cancer, hepatocellular carcinoma and metastatic
CC liver carcinoma in a patient. The method is useful for identifying
CC expression profiles which serve as useful diagnostic markers as well as
CC markers that can be used to monitor disease states, disease progression,
CC drug toxicity, drug efficacy and drug metabolism.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT   Using human plasma carboxy:peptidase B in blood coagulation - is
PT   functionally related to carboxy:peptidase A and pancreas
PT   carboxy:peptidase B
XX
PS   Example 2; Column 37-42; 39pp; English.
XX
CC   This sequence encodes human plasma carboxypeptidase B (PCPB) which
CC   has a molecular weight under non-reducing SDS-PAGE of approx. 60 kD.
CC   PCPB may be used therapeutically in haemostatic regulation.  PCPB is
CC   purified from human plasma or by transformed cell culture by
CC   extraction using plasminogen bound to a solid phase.
CC   (Updated on 25-MAR-2003 to correct PF field.)

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Disclosure; Fig 4; 40pp; English.
XX
CC   Human plasma carboxypeptidase B was isolated from human plasma and
CC   partially sequenced. Oligonucleotide primers were designed based on
CC   the partial amino acid sequences. The primers were used in a PCR
CC   amplification to identify cDNA encoding PCPB from a human liver cDNA
CC   library. The PCR product was capable of encoding the first 37 amino
CC   acids of PCPB; a 46mer probe was used to obtain the full-length
CC   sequence which, although disclosed in the specification, is not
CC   claimed. PCPB inhibits the enzymatic conversion by tPA of
CC   plasminogen to plasmin in the presence of fibrinogen.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 1; Page 507; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   DNA encoding porcine carboxy:peptidase B - used for transforming
PT   host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS   Claim 2; Page 20-21; 34pp; English.
XX
CC   The porcine carboxypeptidase B coding sequence can be place in a
CC   bacterial or pref. Pichia yeast expression vector. The expression
CC   vector further comprises the signal peptide of either human serum
CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 14; Page 131; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence encodes the native prepro-HCPB (see
CC   AAW06172) contained in vector pICI1698.

PT   New modified pro-domain of carboxy-peptidase B - enhances expression
PT   of co-expressed proteins for production of recombinant
PT   carboxy-peptidase or its fusions with antibodies, used, e.g. in
PT   enzyme prodrug therapy
XX
PS   Example 1; Page 52-53; 83pp; English.
XX
CC   The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC   modified pro-domain of CPB on a separate gene to enhance recombinant
CC   expression.  This process can be used to produce recombinant CPB in
CC   eukaryotic cells, or fusions of CPB with antibody chains.  CPB is used in
CC   insulin production and protein sequencing, while its fusions with
CC   antibodies are useful in antibody-directed enzyme prodrug therapy.  The
CC   modified pro-domain provide increased yields of recombinant CPB, possibly
CC   by protecting the C-terminus against enzymatic degradation or by
CC   increasing intracellular trafficking.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 18; Page 140-142; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The present sequence is a cloned pro-HCPB gene contained in
CC   plasmid pICI1738 and which can be expressed in E. coli.

PT   Pharmaceutical kits for use in the treatment of prostate cancer,
PT   comprise anti-human seminal plasma protein single-chain antibody/human
PT   carboxypeptidase fusion protein and a prodrug of
PT   methotrexate-alpha-peptides -
XX
PS   Claim 4; Fig 3; 29pp; Chinese.
XX
CC   The invention relates to a pharmaceutical kit for antibody-directed
CC   enzyme prodrug therapy (ADEPT) to treat prostate cancer. The kit
CC   comprises several respective containers for holding anti-human seminal
CC   plasma protein single-chain antibody (ScFv)/human carboxypeptidase A
CC   (hCPA) fusion protein (ABP97414), a prodrug of methotrexate-alpha-peptide
CC   and a pharmaceutically-acceptable auxiliary for medication. The invention
CC   also encompasses the anti-human seminal plasma protein ScFv/hCPA fusion
CC   protein, and the nucleic acid encoding it (ABZ75116). This was
CC   constructed by linking DNA encoding the ScFv (itself generated by linking
CC   DNAs encoding the heavy and light chain variable regions (VH and VL) of
CC   the murine anti-human seminal plasma protein monoclonal antibody E4B7)
CC   to DNA encoding human carboxypeptidase A via a linker. The ScFv portion
CC   of the fusion protein enables it to be specifically targeted to prostate
CC   cancer cells, where the hCPA portion can then activate the prodrug which
CC   in turn has cytostatic activity towards the cancer cells. The invention
CC   permits the fusion protein to be easily produced in large quantities for
CC   use in ADEPT for prostate cancer treatment. The present sequence
CC   represents DNA encoding the ScFv/hCPA fusion protein of the invention.

PT   New polynucleotide encoding a zinc carboxypeptidase B-like protein
PT   polypeptide, useful for treating diseases associated with
PT   carboxypeptidase dysfunction, e.g. cancer, CNS disorder, COPD or
PT   haematological disorder  -
XX
PS   Claim 1; Fig 1; 113pp; English.
XX
CC   The present sequence encodes a human zinc carboxypeptidase B-like
CC   protein. The zinc carboxypeptidase B-like protein is used for treating
CC   diseases, such as cancer, a CNS disorder, chronic obstructive pulmonary
CC   disease (COPD) or haematological disorders. The zinc carboxypeptidase
CC   B-like protein may also be used to identify compounds which may act
CC   as activators or inhibitors at the enzyme's active site, to raise
CC   specific antibodies which can block the enzyme and effectively reduce
CC   its activity, as a bait protein in a two-hybrid or three-hybrid assay
CC   to identify other proteins which bind to or interact with the human
CC   zinc carboxypeptidase-like protein polypeptide and modulate its
CC   activity, and for immunization of mammals.

XX
PT   New isolated human carboxypeptidase polynucleotide useful for
PT   generating antibodies, as reagents in diagnostic assays and for
PT   screening for compounds useful for treating mental, biological or
PT   medical diseases -
XX
PS   Claim 1; Page 30; 36pp; English.
XX
CC   The present sequence is a cDNA encoding novel human protein (NHP),
CC   carboxypeptidase-related protein. The carboxypeptidase-related
CC   proteins share structural similarity with animal proteases, and
CC   especially carboxypeptidase B or carboxypeptidase A. The
CC   carboxypeptidase-related protein cDNA is useful for the detection of
CC   mutant human carboxypeptidases, or inappropriately expressed human
CC   carboxypeptidases for the diagnosis of disease, and also as a
CC   therapeutic. It is also useful in drug screening, for generation of
CC   antibodies, as reagents in diagnostic assays, for the identification of
CC   other cellular gene products related to human carboxypeptidases, and as
CC   reagents in assays for screening for compounds that are useful for
CC   treating mental, biological or medical disorders and diseases. Nucleotide
CC   constructs encoding functional NHPs can also be used in gene therapy.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission
JOURNAL Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp, URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)
COMMENT Please visit our web site (http://genome.gsc.riken.go.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAGCGGCCGCAACTCGAGTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence[5' GAGAGAGAGAAGGATCCAAGAGCTCAATTAATTTAATTAAACCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: SstI; 3' end: XhoI. Host: SOLR.

PT   Human brain carboxypeptidase B isolated from the hippocampus useful for
PT   screening agents for the treatment of Alzheimer's and other brain
PT   disorders -
XX
PS   Claim 2b; Page 64-68; 84pp; Japanese.
XX
CC   This invention describes a novel protein with peptidase activity
CC   against brain beta-amyloid precursor protein which has been isolated from
CC   human hippocampus and which has cerebroprotective, antialzheimers,
CC   nootropic, neuroprotective and hemostatic activity and which can be used
CC   as a vaccine or for gene therapy. The protein, and compounds identified
CC   by screening as promoters or inhibitors of its activity, are used to
CC   regulate beta-amyloid accumulation in the brain and treat or prevent
CC   diseases in which this occurs, such as Alzheimer's, senile dementia,
CC   inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 4; Fig 1; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   cDNA, the gene for which is located on chromosome 13.

PT   humans
XX
PS   Example 1; Page 24; 35pp; English.
XX
CC   This sequence encodes the human plasma carboxypeptidase B (PCPB) mutant
CC   hPCPBthr147. The invention relates to a method for determining the
CC   presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC   comprises obtaining a prepared tissue or blood sample and determining the
CC   presence of DNA coding for naturally occurring polymorphs of the protein
CC   containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
```

```
CC   respectively). Determination of the relative distribution of the PCPB
CC   polymorphs in a patient's blood by genetic or protein analysis by the
CC   methods is useful to determine the risk of thrombotic disease in humans.
CC   Such assessments may be made by accumulating information concerning the
CC   relative distribution of the different polymorphs within the general
CC   population compared with populations known to be at risk and establishing
CC   a PCPB polymorph profile for at-risk patients.

PT   Diagnosing and detecting the progression of liver cancer,
PT   hepatocellular carcinoma or metastatic liver tumor in a patient,
PT   involves detecting the level of expression of two or more genes in a
PT   liver tissue sample  -
XX
PS   Claim 1; SEQ ID NO 2397; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT   New human plasma carboxypeptidase B - used as haemostatic
PT   regulator for clotting blood, partic. for treating blood clotting
PT   disorders, e.g. haemophilia
XX
PS   Disclosure; Fig 4; 40pp; English.
XX
CC   Human plasma carboxypeptidase B was isolated from human plasma and
CC   partially sequenced. Oligonucleotide primers were designed based on
CC   the partial amino acid sequences. The primers were used in a PCR
CC   amplification to identify cDNA encoding PCPB from a human liver cDNA
CC   library. The PCR product was capable of encoding the first 37 amino
CC   acids of PCPB; a 46mer probe was used to obtain the full-length
CC   sequence which, although disclosed in the specification, is not
CC   claimed. PCPB inhibits the enzymatic conversion by tPA of
CC   plasminogen to plasmin in the presence of fibrinogen.

PT Lung cancer associated gene sequences, referred to as lung cancer
PT antigens, useful for treatment, prevention, and diagnosis of disorders
PT such as lung cancer -
XX
PS Claim 1; Page 507; 1425pp; English.
XX
CC Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC associated proteins and polynucleotide sequences, their agonists, and
CC antagonists may have neuroprotective; cytostatic; cardioactive;
CC immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC general; nephrotropic; antiinfective; gynecological; or antibacterial
CC activity. The invention also includes antibodies specific for the
CC protein or polynucleotide sequences. The lung cancer associated
CC polynucleotide sequences may be used for detection of lung cancer,
CC chromosome identification, as chromosome markers, and for numerous other
CC diagnostic or research purposes. The proteins may be used to treat
CC disorders such as neural, immune, muscular, reproductive,
CC gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC disorders. The proteins may also be used in the treatment of wounds and
CC infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC peptide AAB58549 are used in the course of the invention for the
CC identification and characterisation of the polynucleotide and protein
CC sequences.

XX
CC   A cDNA sequence (AAT35760) codes for the mature form (AAW00602) of
CC   rat carboxypeptidase B (CPB).  A full-length sequence including
CC   cDNA (AAT35759) coding for the activation peptide (AAW00601) can
CC   be obtd. by PCR amplification (see also AAT35756 and AAT35758) of cDNA
CC   derived from Sprague-Dawley rat pancreas.  Pro-CPB can be expressed
CC   in host cells, e.g. Escherichia coli, and subsequently recovered,
CC   refolded and cleaved with trypsin to yield the active enzyme.  CPB
CC   produced this way is cheaper than porcine pancreatic enzyme, and is
CC   free of other proteases.

PT   DNA encoding porcine carboxy:peptidase B - used for transforming
PT   host cells, partic. Pichia species, for prodn. of the enzyme
XX
PS   Claim 1; Page 20; 34pp; English.
XX
CC   The porcine carboxypeptidase B coding sequence can be place in a
CC   bacterial or pref. Pichia yeast expression vector. The expression
CC   vector further comprises the signal peptide of either human serum
CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 16; Page 137-139; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The mature native HCPB and PelB leader sequence coding sequences
CC   were cloned (using primers AAT42498-99) from pICI1712 (see AAT42497) for
CC   expression in E. coli. The present sequence encodes the mature HCPB and
CC   PelB leader sequence.

PT   Two component system for anti-tumour therapy - comprising targeting
PT   moiety linked to mutated enzyme which can transform an
PT   anti:neoplastic prodrug
XX
PS   Reference Example 15; Page 134-136; 182pp; English.
XX
CC   A two-component system for anti-tumour therapy comprises a targeting
CC   moiety linked to a mutated enzyme which can transform an anti-neoplastic
CC   prodrug. The system is based on antibody directed enzyme prodrug therapy
CC   (ADEPT) using non-naturally occurring mutant forms of host enzymes,
CC   pref. human pancreatic ribonuclease (HP-RNase), (see AAT42478-83).
CC   Alternatively a modified human pancreatic carboxypeptidase B (HCPB) can
CC   be used. The mature native HCPB coding sequence (see AAT42494) was cloned
CC   into the  secretion vector pICI266 (which contains a PelB translation
CC   leader  sequence). To help purification and detection of the expression
CC   construct a C-terminal petpide tag, (His)6-c-myc was added to the enzyme.
CC   The tag  consists of 6 histidines, a tri-peptide linker (EPE) and a
CC   peptide  sequence (EQKLISEEDL) from c-myc which is recognises by antibody
CC   9E10.  The C-terminal is completed by addition of an aspargine. The final
CC    vector, pICI1712, contains the present sequence which encodes the
CC   mature HCPB-(His)6-c-myc protein with PelB leader sequence.

PT   New modified pro-domain of carboxy-peptidase B - enhances expression
PT   of co-expressed proteins for production of recombinant
PT   carboxy-peptidase or its fusions with antibodies, used, e.g. in
PT   enzyme prodrug therapy
XX
PS   Example 1; Page 52-53; 83pp; English.
XX
CC   The human pancreatic carboxypeptidase B (CPB) can be co-expressed with a
CC   modified pro-domain of CPB on a separate gene to enhance recombinant
CC   expression.  This process can be used to produce recombinant CPB in
CC   eukaryotic cells, or fusions of CPB with antibody chains.  CPB is used in
CC   insulin production and protein sequencing, while its fusions with
CC   antibodies are useful in antibody-directed enzyme prodrug therapy.  The
CC   modified pro-domain provide increased yields of recombinant CPB, possibly
CC   by protecting the C-terminus against enzymatic degradation or by
CC   increasing intracellular trafficking.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission
JOURNAL Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp, URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)
COMMENT Please visit our web site (http://genome.gsc.riken.go.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAGCGGCCGCAACTCGAGTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence[5' GAGAGAGAGAAGGATCCAAGAGCTCAATTAATTTAATTAAACCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: SstI; 3' end: XhoI. Host: SOLR.

```

was primed with an oligo(dT) primer [ATGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was ligated to a DraIII adaptor [TGTTGGCCTACTGG], digested and cloned into distinct DraIII sites of the pME18S-FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end primer CGACCTGCAGCTCGAGCACA."

PT Human brain carboxypeptidase B isolated from the hippocampus useful for
PT screening agents for the treatment of Alzheimer's and other brain
PT disorders -
XX
PS Disclosure; Page 74-75; 84pp; Japanese.
XX
CC This invention describes a novel protein with peptidase activity
CC against brain beta-amyloid precursor protein which has been isolated from
CC human hippocampus and which has cerebroprotective, antialzheimers,
CC nootropic, neuroprotective and hemostatic activity and which can be used
CC as a vaccine or for gene therapy. The protein, and compounds identified
CC by screening as promoters or inhibitors of its activity, are used to
CC regulate beta-amyloid accumulation in the brain and treat or prevent
CC diseases in which this occurs, such as Alzheimer's, senile dementia,
CC inherited cerebral hemorrhage, Down's syndrome, and head trauma.

PT   New isolated human protease proteins, useful for developing therapeutic
PT   or diagnostic compositions, particularly for developing human
PT   therapeutic agents that modulate protease activity in cells or tissues
PT   -
XX
PS   Claim 1; Page -; 80pp; English.
XX
CC   The invention discloses an isolated human protease peptide, its allelic
CC   variant or orthologue. The proper functioning of the cell requires
CC   careful control of the levels of important structural proteins, enzymes
CC   and regulatory proteins. One of the ways the cell reduces the steady
CC   state level of a particular protein is by proteolytic degradation.
CC   Proteolysis can also be used to convert a pre or pro-protein in to an
CC   active form. Proteases also regulate many different cell proliferation,
CC   differentiation and signalling processes. The peptides and nucleic acid
CC   molecules are useful in the development of human therapeutics (gene and
CC   protein therapy) and diagnostic compositions. The peptides are also
CC   useful for raising antibodies or eliciting an immune response (vaccine),
CC   as a reagent (including the labeled reagent) in assays designed to
CC   quantitatively determine levels of the protein (or its binding partner or
CC   ligand) in biological fluids, or as markers for tissues in which the
CC   corresponding protein is preferentially expressed and in methods for
CC   identifying a modulator of the peptide or an agent that binds to the
CC   peptide. The agents identified are useful for treating protease-related
CC   conditions that are specific for the subfamily of proteases that the
CC   peptide belongs to, particularly in cells and tissues that express the
CC   protease, such as inflammation, cancer, arteriosclerosis and degenerative
CC   disorders. The modulator of the peptide is also useful for treating a
CC   disorder characterised by an absence of, inappropriate or unwanted
CC   expression of the protein. The sequence presented is the human protease
CC   protein, variant #2, the gene for which is located on chromosome 13.
CC   Note: This sequence is not shown in the specification but has been
CC   created by the indexer from information given in figure 3.

PT   Antibody to human plasma carboxy:peptidase B - useful for detecting
PT   and purifying hPCPB for use in treating clotting disorders e.g.
PT   haemophilia A
XX
PS   Disclosure; Figure 4; 40pp; English.
XX
CC   An antibody which specifically binds human plasma carboxypeptidase B
CC   (hPCPB) and does not cross react with other carboxypeptidases is
CC   useful for the detection of hPCPB in vitro.  The antibody is also
CC   used for purifying hPCPB from a sample.  Purification comprises
CC   passing a sample thought to contain hPCPB over either a column to
CC   which antibody has been bound, or a plasminogen affinity column,
CC   eluting the column and then recovering the fraction containing the
CC   hPCPB.

PT Detecting new polymorphism of human plasma carboxypeptidase B -
PT comprises Alanine or Threonine at position 147 of protein by DNA or
PT protein analysis, useful to detect risk of thrombotic disease in
PT humans
XX
PS Disclosure; Page 25-26; 35pp; English.
XX
CC This sequence is the human plasma carboxypeptidase B (PCPB) mutant
CC hPCPBthr147. The invention relates to a method for determining the
CC presence of DNA or protein polymorphisms of PCPB in human subjects, which
CC comprises obtaining a prepared tissue or blood sample and determining the
CC presence of DNA coding for naturally occurring polymorphs of the protein
CC containing Alanine or Threonine at position 147 (PCPB1 and PCPB2
CC respectively). Determination of the relative distribution of the PCPB
CC polymorphs in a patient's blood by genetic or protein analysis by the
CC methods is useful to determine the risk of thrombotic disease in humans.
CC Such assessments may be made by accumulating information concerning the
CC relative distribution of the different polymorphs within the general
CC population compared with populations known to be at risk and establishing
CC a PCPB polymorph profile for at-risk patients.

XX
PS   Claim 2; Fig 4; 40pp; English.
XX
CC   This amino acid sequence was deduced from a clone isolated from a
CC   human liver cDNA library. There is about 40% sequence identity
CC   between the deduced preproPCPB amino acid sequence and pro-human
CC   mast cell carboxypeptidase A and between preproPCPB and prepro-rat
CC   carboxypeptidase B. Human PCPB has the same substrate binding sites
CC   as, and shares 6 cysteine residues which form 3 intramolecular
CC   disulphide bonds with, bovine and rat carboxypeptidase B. The
CC   presence of the same amino acid (Asp at position 348 of the mature
CC   protein) at the region in carboxypeptidases that determines
CC   substrate specificity, suggests that PCPB represents a plasma-
CC   derived carboxypeptidase. PCPB inhibits the enzymatic conversion by
CC   tPA of plasminogen to plasmin in the presence of fibrinogen.

PT   Lung cancer associated gene sequences, referred to as lung cancer
PT   antigens, useful for treatment, prevention, and diagnosis of disorders
PT   such as lung cancer -
XX
PS   Claim 11; Page 944-945; 1425pp; English.
XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the
CC   protein or polynucleotide sequences. The lung cancer associated
CC   polynucleotide sequences may be used for detection of lung cancer,
CC   chromosome identification, as chromosome markers, and for numerous other
CC   diagnostic or research purposes. The proteins may be used to treat
CC   disorders such as neural, immune, muscular, reproductive,
CC   gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
CC   disorders. The proteins may also be used in the treatment of wounds and
CC   infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and
CC   peptide AAB58549 are used in the course of the invention for the
CC   identification and characterisation of the polynucleotide and protein
CC   sequences.

PT   Novel metallocarboxy peptidase-like polypeptide is useful in treating
PT   neurodegenerative, immune, etc. disorders  -
XX
PS   Example 3; Fig 1; 146pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino
CC   acid sequence of 374, 41, 14, 15, 41, 22, 15, 27, 14, 9, 18, 20, 15,
CC   354, 165, 374, 354, or 41 amino acids, fully defined in the
CC   specification, or its translated protein coding portion, mature protein
CC   coding portion, extracellular portion or active domain. The polypeptide
CC   is a human secreted metallocarboxypeptidase-like polypeptide. It
CC   is useful for treating mammalian diseases including:
CC   neurodegenerative diseases such as Parkinson's or Alzheimer's diseases,
CC   osteoporosis, osteoarthritis, disorders linked to reduced tissue
CC   growth, Huntington's disease, amylotrophic lateral sclerosis, stroke,
CC   reperfusion, wound healing, infectious diseases, immune and autoimmune
CC   disorders such as severe combined immunodeficiency, rheumatoid
CC   arthritis, Guillain-Barre syndrome, insulin dependent diabetes
CC   mellitus, graft-versus-host disease and allergy, cancer, and
CC   haemophilia. The polypeptide is also useful in medical imaging, as an
CC   immunogen to generate antibodies, as a nutritional source or
CC   supplement, and as a contraceptive. The present sequence is
CC   a carboxypeptidase homologue protein of Bothops jararaca.

XX
CC   The amino acid sequence of the rat mature carboxypeptidase-B
CC   (CPB) (AAW00602) was deduced from a cDNA sequence (see also AAT35760)
CC   obtd. by PCR amplification of Sprague-Dawley rat pancreas cDNA.
CC   The sequence of the activation peptide (AAW00601) of pro-CPB has
CC   also been deduced.  Pro-CPB (pref. with a C290S mutation) can be
CC   expressed in host cells, e.g. Escherichia coli, and subsequently
CC   recovered, refolded and cleaved with trypsin to yield the active
CC   enzyme.  CPB produced this way is cheaper than porcine pancreatic
CC   enzyme, and is free of other proteases.

CC   albumin (designated pLGD23 - NRRL B-21029); premating factor alpha
CC   (designated pFJ489 - NRRL B-21028); mating factor alpha (designated
CC   pFJ474 - NRRL B-21032) or the porcine proCBB signal peptide,
CC   (designated pLGD27 - NRRL B-21027).  The method can be used for
CC   producing large amounts of porcine carboxypeptidase B and when
CC   produced in Pichia yeast, the protein does not need solubilisation
CC   or folding.  The produced enzyme is then used for pref. cleaving
CC   basic residues from the carboxy terminus of proteins.

PT   New carboxypeptidase B, which is free of animal products and
PT   contaminating enzyme activity, useful for producing biopharmaceutical
PT   agents (e.g. insulin) and biologically active polypeptides, as well as
PT   in protein sequence analysis  -
XX
PS   Claim 4; Page 41-42; 42pp; English.
XX
CC   The sequence represents porcine carboxypeptidase B (CpB), which is
CC   essentially free of contaminating protease activity (e.g. trypsin or
CC   chymotrypsin activity) and free of animal products, bacterial cell
CC   components and other contaminants that result from purification
CC   processes. CpB is a zinc-containing pancreatic exopeptidase which
CC   specifically removes C-terminal arginine, lysine and ornithine from
CC   peptides. The CpB of the invention is useful for commercial and research
CC   purposes, e.g. in production of biopharmaceutical agents, such as insulin
CC   and other biologically active polypeptides, as well as in protein
CC   sequence analysis. Compositions containing CpB are useful in preparing
CC   proteins which are in need of proteolytic processing in order to form the
CC   mature protein.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RA   Ramos A., Mahowald A., Jacobs-Lorena M.;
RT   "Gut-specific genes from the black fly Simulium vittatum encoding
RT   trypsin-like and carboxypeptidase-like proteins.";
RL   Insect Mol. Biol. 1:149-163(1993).
CC   -!- FUNCTION: Involved in the digestion of the blood meal.
CC   -!- SUBCELLULAR LOCATION: Secreted.
```

```
CC   -!- TISSUE SPECIFICITY: Gut-specific.
CC   -!- INDUCTION: By blood meal.
CC   -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M14.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  JOURNAL   Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
            Circle, Palo Alto, CA 94303, USA
COMMENT     This CDS clone is a part of a collection of human full length
            expression clones generated by BD Biosciences Clontech and the
            Harvard Institute of Proteomics. Each CDS has been cloned in two
            forms: with and without stop-codon (to allow fusion with C-terminal
            tag). The CDS has been  directionally cloned using BD In-Fusion(TM)
            cloning system between the SalI  and HindIII sites of the pDNR-DUAL
            vector. Additional sequences in the clone:  'ACC' after SalI site
            and before 'ATG' to provide Kozak consensus sequence; 'GG' after
            last codon and before HindIII site to maintain reading frame.
            Clone distribution: http://bioinfo.clontech.com/orfclones.

COMMENT Contact: MGC help desk
Email: cgapbs-r@mail.nih.gov
Tissue Procurement: CLONTECH
cDNA Library Preparation: CLONTECH Laboratories, Inc.
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Sequencing Group at the Stanford Human Genome Center, Stanford University School of Medicine, Stanford, CA 94305
Web site: http://www-shgc.stanford.edu
Contact: (Dickson, Mark) mcd@paxil.stanford.edu
Dickson, M., Schmutz, J., Grimwood, J., Rodriquez, A., and Myers, R. M.

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IRAL Plate: 16 Row: f Column: 21
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 4503004.
